

Instructions for using the Ultra-I-Beam Protector ®

1. Remove the Ultra-I-Beam Protector from the shipping box.
2. When you are ready to install the Ultra-I-Beam Protector, remove the wooden spacer. (Removal of the wooden spacer more than 30 minutes in advance of installation may make it more difficult to install the unit).
3. Grasp the Ultra-I-Beam Protector with one hand on either side of the top end (unit is not directional so either end can be considered the top for installation purposes).
4. Pull hands apart to further open the unit to form an open wedge. This may also be done with a screwdriver or other "wedging" device that is approximately the same thickness as the I-Beam.
5. Hold the Ultra-I-Beam Protector at about a 45° angle to the I-Beam flange and starting with the top corner, push the unit onto the flange of the beam. Continue pushing the Ultra-I-Beam Protector on to the I-Beam flange by simultaneously pushing in and up until the unit is completely attached.
6. Position the Ultra-I-Beam Protector as desired by sliding the unit up or down on the flange of the I-Beam.
7. Up to 4 Ultra-I-Beam Protectors may be added to each I-Beam, by following steps 1-6 above.
